

PRIMER INTEGRATIONS

Good data is the first step to trusted NLP.

Primer simplifies your data strategy by providing various pre-built connectors to connect to your applications and data sources. It also enables cleaning, structuring, and enriching raw data from these sources so you can quickly build and deploy models and generate valuable insights for your business.

PRIMER INGEST FEATURES AND FUNCTIONALITY

Seamless connectivity to various applications or data sources

Comes with pre-built connectors so you can bring in data from databases, data stores, data warehouses, applications, and query engines. Support for:

- Applications such as Salesforce, Zendesk and others
- Data warehouses such as Snowflake, Redshift, Teradata and others
- Data stores like S3
- Local storage where the user can upload PDF, CSV, Excel files and many more

Data integration and transformation of your data

The majority of ML teams time is often spent wrangling data. Primer Ingest handles this for you, saving you time to build performant NLP models that generate insights for your organization.

PRIMER INGEST FEATURES AND FUNCTIONALITY (CONTINUED)
